

Our Pregnancy Menu

During pregnancy & breast feeding, there are limited skin treatments available for you to have. Whilst Cosmetic Medical treatments and laser treatments are not recommended, it is important to maintain your quality of skin with advanced skin treatments. We have developed a range of safe treatments available to you as well as treatments to consider after pregnancy.

Skin Needling to face & neck to stimulate collagen, tighten pores and even out skin tone. No numbing cream is used for this treatment and it is well tolerated.
